

# The B-47 *Stratojet* Association

EB-47L

The EB-47L PACCS

In 1963, 35 obsolescent B-47Es were modified as electronics communications aircraft under the designation EB-47L. The EB-47Ls, equipped with AN/ARC-89 (V) communications relay transceivers were operated by Post Attack Command Control Squadrons, and served as relay stations between other aircraft or between aircraft and ground stations during and after a nuclear attack.
